## **2.0 FACILITY DESCRIPTION**

This section describes the facility's location, past and present operations (including waste management practices), waste generating processes, history of documented releases, regulatory history, environmental setting, and receptors.

### **2.1 FACILITY LOCATION**

The VWR facility is located at 2055 Hammond Drive in Schaumburg, Cook County, Illinois (latitude 42° 04' 00" N and longitude 88° 02' 18" W) (McKesson, 1980c), as shown in Figure 1. The facility occupies approximately two and three-quarter acres of land in an industrial park.

The VWR facility is bordered on the west by Hammond Drive, on the east by a low-lying, grassy area, on the north by the A.I.T. Company, and on the south by the Seivert Corporation.

### **2.2 FACILITY OPERATIONS**

The VWR facility is a wholesale chemical warehouse and distribution center. The facility supplies industrial chemicals to off-site customers. In addition, VWR accepts, stores, and transports certain hazardous waste solvents generated by off-site customers. Wastes managed at the facility consist of a variety of waste solvents generated by off-site customers and damaged or off-specification products that cannot be returned to the manufacturer or sold as downgraded products. The type of hazardous waste solvents and damaged or off-specification products which are managed as wastes by the facility varies depending on the needs of the facility's customers. VWR does not conduct any on-site treatment or disposal activities, or manufacturing or processing activities at the facility.

In 1980, the McKesson Chemical Company built the facility and began chemical warehousing and distribution operations. Prior to the construction of the warehouse the land was used for agricultural purposes. In November 1986, VWR purchased the McKesson Chemical Company and this facility. There were no operational changes.

The facility currently employs approximately 21 persons, 7 of whom work in the warehouse area. The facility occupies an approximately two and three-quarter-acre parcel which includes a single building of approximately 50,500 square feet, and an adjoining 11,100-square-foot outdoor raw material storage area along the east side of the building. There is a 12,600-square-foot parking lot along the south side of the building. The outdoor raw material storage area is surrounded by an eight-foot high chain-link fence (See Photo No. 1).

The facility's waste streams are managed in two SWMUs. Waste solvents are stored outside in the Container Storage Area (SWMU 1). Damaged or off-specification products which are managed as wastes by the facility are stored indoors in the Warehouse Storage Area (SWMU 2). Facility SWMUs are identified in Table 1. The facility layout, including SWMU locations, is shown in Figure 2.
